I wondered if any ICQA data analysts out there could answer the following questions. I have an interview for this position next week. I'm not sure what to expect at this point. I hope that this will be a good thing. If I can do that, I want to get a software mentor and get involved in corporate software engineering jobs. As a computer science graduate, I appreciate that this knowledge will help with the position of the data analyst. I hope that I can finish the Amernsty training first when I get an offer, as I am already in the class. I know Amazon can be a grind to get up, but it's not impossible. If any ICQA data analysts have information, please comment on this post. Any information that is helpful is also welcome. TL-DR: I'm trying for ICQA Data Analyst and just want more information about the position and interview preparation tips. Page 2 33 Comments
